Opens deep bite without trauma

Bite-Bumpers work in open and deep bite cases by allowing the anteriors to ride up and out of occlusion. The Bite-Bumpers eliminate bond failures of brackets and are especially valuable with ceramic or self-ligating brackets. The unique fixed "placement-jig" guarantees the correct height on the lingual of the tooth and makes sure the two Bite-Bumpers are 100 % parallel.

The Bite-Bumpers are made of a composite polymer that is more comfortable, aesthetic and will increase biocompatibility in nickel sensitive patients.

Bite-Bumpers are bonded in the same manner as metal or ceramic brackets. The Bite-Bumpers have a slotted mechanical bonding base.

The placement-jig can easily be removed by hand or by a cutting instrument after bonding - see illustration.

INSTRUCTIONS

2. Remove the jig

3. Bite-Bumper ready

Bite-Bumper™	
Description	Catalogue No.
Bite-Bumper (in packs of 10)	BB-00-01
